# Beagle Training For Obese Beagles

If there are several things a fat beagle needs, that would be diet plan modifications, frequent exercise and [beagle training](#). But just before we proceed to the remedies to this weight gain issue, let us tackle first the issue why many dogs are overweight. As everyone knows, dogs nowadays exist as domestic pets. In addition to providing them their primary necessities, many owners are also keen on pampering their precious pooch with pricey stuff like designer dog collar, deluxe bed and more. Most of them are pampered the way parents pamper their kids. Put differently, their role have started to evolve from working animals in the wild to preferred household pets which also means member of the family.

But even though the way they live has improved, sad to say that change have become one of the reasons of various health issues. Instead of all-natural healthy food plan, many owners feed their pets with kibbles and canned foods not knowing if that certain dog food is of high quality. Apart from that, it can be so hard to resist those cute eyes pleading for food whenever he sees you eating something he is not supposed to eat like chocolate and other foods safe for human consumption but dangerous for dogs.

An overweight pet calls for a change in diet and lifestyle. When switching foods, don't forget to do so gradually so as not to cause stomach upset. High quality food rich in protein should be introduced in small amount at a time then slowly increase the amount over time.

Regular exercise is as significant as high quality food. Your beagle should be taken out for walks at least once daily and must be provided with [dog training](#) sessions on regular basis. Train your dog basic obedience and if he has mastered the basic, go for other complicated tricks like rollover, play dead and others. By doing this, your dog will keep on moving hence give him more exercise. Furthermore, training will also keep him mentally too busy to think about food.

To make daily walks stress-free, it is best that your pet is taught how to walk properly at the same time trained in using collar and leash at an early age. To sum it all up, developing good habit starts at an early age so better start training your puppy before it's too late.
