Orthopaedic Dog Beds Can Ease Your Friends Sleep

When he lies down, does your elderly dog find it difficult to get comfortable? He has always settled down quite happily outside your bedroom door, or in the hall or perhaps even by the side of your bed, and has always just had an old blanket to sleep on. Recently, however, he has been continuously moving around and finding it difficult to settle down. An [orthopaedic dog bed](#) could make his life a whole lot more comfortable.

Dogs generally don't complain, and will sleep on pretty much anything. Newspapers (particularly those being read) are particularly popular and an old sweater is also favoured, however, as dogs get older, just like us, arthritis begins to get hold, their legs start to ache as does their back, and at this stage, it is time to think of a more comfortable bed. This is where orthopaedic dog beds come in.

[Orthopaedic dog beds](#) are usually made from memory foam, some use whole memory foam and some use crumbled foam, they also generally have a waterproof lining of some sort. This can be incredibly useful if your dog has a weak bladder or is given to drooling. If your dog has bad health then you should always take advice from your veterinary surgeon, particularly if there is any sign of joint pains in the back or legs.

It is not only elderly dogs who appreciate orthopaedic dog beds; dogs who have recently had surgery will recover much faster if given a comfortable orthopaedic bed to lie on. Orthopaedic dog beds can aid recovery of joint sores where those have developed, and prevent development of them.

The orthopaedic dog bed can be placed in the position that your dog usually sleeps on his current blanket, and will be much more comfortable on a properly designed bed. But always try to keep him out of drafts. See the difference it makes by giving him an orthopaedic dog bed.
